Name _____ Period_____ Date_____

Writing Fractions

Procedure:
    1. Set the number of equal parts that make one full unit as the denominator.
    2. Set the number of parts under consideration as the numerator.

Example:
    Express 16 cents of a quarter.
        **Since you have 16 cents, that will be the numerator. Since there
        are 25 cents in one full quarter, that will be the denominator.**

        Therefore, 16 cents of a quarter is $\frac{16}{25}$.

Express the following quantities as a fraction of a quarter.

    1. 24 cents   **2.** 3 cents   **3.** 1 cent

Express the following quantities as a fraction of a ten slice pizza.

    1. 5 slices   **2.** 10 slices   **3.** 3 slices
