

Name _____ Date _____

Solve each problem. Explain your thinking.

Write an equation(s). Be sure to label your solutions.

1. Sara picked 96 strawberries. She ate 16 of them before putting the rest equally into 5 containers. How many strawberries did she put into each container?

2. Evan had 6 packages of gum. Each package had 8 pieces of gum. He gave an equal amount to 6 friends and had 12 left for himself. How many did he give to each friend?

3. Julian has 8 books. His sister has 3 times as many as Julian has. How many books do they have together?

4. Mrs. Hall bought 8 boxes of oranges. Each box had 10 oranges. She gave her 29 students each an orange. How many oranges did she have left?

5. Marcus bought some dog treats for his 4 dogs. He wanted each dog to have 8 treats. He bought 2 bags that had 30 treats in each. Does he have enough? If he does, how many extras will he have? If he doesn't how many more does he need?

Can you think of a way to write a single equation for each problem?
